

FortiAnalyzer

Centralized Logging, Analysis, and Reporting

Enhanced Visibility With FortiAnalyzer Platforms

FortiAnalyzer platforms integrate network logging, analysis, and reporting into a single system, delivering increased knowledge of security events throughout a network. It provides organizations of any size with centralized security event analysis, forensic research, reporting, content archiving, data mining, malicious file quarantining and vulnerability assessment. Centralized collection, correlation, and analysis of geographically and chronologically diverse security data from Fortinet appliances and third-party devices deliver a simplified, consolidated view of your security posture.

The FortiAnalyzer family minimizes the effort required to monitor and maintain acceptable use policies, as well as identify attack patterns that can be used to fine tune the security policy, thwarting future attackers. In addition, FortiAnalyzer platforms provide detailed data capture that can be used for forensic purposes to comply with regulations and policies regarding privacy and disclosure of information security breaches.

Security Event Information Management

You can put time back in your day by deploying a FortiAnalyzer platform into your security infrastructure, creating a single view of your security events, archived content, and vulnerability assessments. FortiAnalyzer platforms accept a full range of data from Fortinet solutions, including traffic, event, virus, attack, content filtering, and email filtering data. It eliminates the need to manually search multiple log files or manually analyze multiple consoles when performing forensic analysis or network auditing. A FortiAnalyzer platform's central data archiving, file quarantine and vulnerability assessment functionality further reduce the amount of time you need to spend managing the range of security activity in your enterprise or organization.

Vulnerability and Compliance Management Subscription

With the release of FortiAnalyzerOS 4.0, Fortinet offers an enhanced scanning capability that utilizes a dynamic signature dataset to detect vulnerabilities and recommend remediation. The optional Vulnerability and Compliance Management (VCM) subscription provides frequent updates developed by the FortiGuard Labs. The subscription enhances capabilities such as device discovery, mapping, assets definition, asset prioritization, and customized reporting.

DATASHEET

The FortiAnalyzer Difference

A FortiAnalyzer platform delivers complete security oversight with granular graphical reporting. Its breadth of data collection functions eliminate the blind spots in understanding your security posture. Its unique forensic analysis tools provide you with the ability to discover, analyze, and mitigate threats before perimeter breach or data loss/theft occurs. The FortiAnalyzer system's forensic analysis tool enables detailed user activity reports, while the vulnerability assessment tool automatically discovers, inventories and assesses the security posture of servers and hosts within the network infrastructure.

FortiAnalyzer systems come with a one-year limited hardware warranty and 90-day limited software warranty.

Features

Benefits

Network Event Correlation

Allows IT administrators to more quickly identify and react to network security threats across the network.

Streamlined Graphical Reports

Provides network-wide reporting of events, activities and trends occurring on FortiGate® and third party devices.

Scalable Performance and Capacity

FortiAnalyzer family models support thousands of FortiGate and FortiClient™ agents.

Centralized Logging of Multiple Record Types

Including traffic activity, system events, viruses, attacks, Web filtering events, and messaging activity/data.

Seamless Integration with the Fortinet Product Portfolio

Tight integration maximizes performance and allows FortiAnalyzer resources to be managed from FortiGate or FortiManager™ user interfaces.

FortiAnalyzer	100C	400B	1000B	2000B	4000A
Hardware Specification					
Security Hardened Platform	Yes	Yes	Yes	Yes	Yes

Compliance					
FCC Class A Part 15, UL/CUL, C Tick, CE, VCCI					

¹A licensed network device is defined as:

- One (1) FortiGate device without Virtual Domain (VDOM) mode enabled,
- or One (1) VDOM if FortiGate device is running in multiple VDOM mode
- or One (1) Third-party SYSLOG compatible device

Graphic Reporting

FortiAnalyzer systems empower the network or security administrator with the knowledge needed to secure their networks through a comprehensive suite of standard graphical reports and the total flexibility to customize custom reports. Network knowledge can be archived, filtered and mined for compliance or historical analysis purposes.

Granular Information

The FortiAnalyzer User Interface (UI) enables administrators to drill deep within security log data to provide the granular level of reporting necessary to understand what is happening on your network. Historical or real-time views allow administrators to analyze log and content information, as well as network

traffic. The advanced forensic analysis tools allow the administrator to track user activities to the content level.

Real-Time Log Viewer

The ability to monitor network, traffic and user events in real-time or browse historical for specific events provides powerful insight into network security threats, performance and user behavior.

Supported Devices

- FortiGate Multi-Threat Security Systems
- FortiMail Messaging Security Systems
- FortiClient Endpoint Security Suite
- FortiManager Centralized Management
- Any Syslog-Compatible Device

FortiAnalyzerOS 4.1 provides the following features

General System Functions

Profile-Based Administration
Secure Web Based User Interface Encrypted
Communication & Authentication Between
FortiAnalyzer Server and FortiGate Devices
Mail Server Alert Output
Connect / Sync FortiAnalyzer
SNMP Traps
Syslog Server Support
RAID Configurations, Change / View RAID Level
Support For Network Attached Storage (NAS)
Launch Management Modules
Launch Administration Console
Configure Basic System Settings
Online Help
Add/Change/Delete a FortiGate Device
View Device Groups
View Blocked Devices
View Alerts / Alert Events
Alert Message Console
View FortiManager Connection Status
View System Information / Resources
View Statistics
View Operational History
View Session Information
Backup / Restore
Restore Factory Default System Settings
Format Log Disks
Migrate data from FortiAnalyzer to another

DLP Archive / Data Mining

All Functions of Log Analysis & Reporting with additional tools to detect and analyze data losses
View by Traffic Type
View Content Including: HTTP (Web URLs), FTP (Filenames), Email (Text), and Instant Messaging (Text)
View Security Event Summaries
View Traffic Summaries
View Top Traffic Producers

Network Analyzer

Real-Time Traffic Viewer
Historical Traffic Viewer
Customizable Traffic Analyzer Log
Search Network Traffic Logs

Log Analysis & Reporting

View/Search/Manage Logs
Automatic Log Watch
Profile-Based Reporting
Over 300 Predefined Reports plus customization
Example Reports Include:
- Attacks: By FortiGate Unit, by Hour Of The Day, by Category, and by Top Sources
- Viruses: Top Viruses Detected, Viruses Detected by Protocol
- Events: By Firewall, Overall Events Triggered, Security Events Triggered, & Events Triggered by Day of Week
- Mail Usage: Top Mail Users by Inbound and Outbound Web Usage Reports
- Web Usage: Top Web Users, Top Blocked Sites, and Top Client, Attempts to Blocked Sites
- Bandwidth Usage: Top Bandwidth Users, Bandwidth by Day and by Hour, and Bandwidth Usage by Protocol Family
- Protocols: Top Protocols Used, Top FTP Users, & Top Telnet Users
- Wan-Opt log information
Log Aggregation to Centralized FortiAnalyzer
FortiClient Specific Reports

Central Quarantine

Configure Quarantine Settings
View Quarantined Files List
Quarantine Summary by type of file, reason it was detected, first and last detected times, total unique quarantine files, and total number of detections for each type and reason

Forensic Analysis

Track User Activities by Username, Email Address, or IM Name
Supports FortiGuard Web Filtering Reports to Show Web Site Access And Blocked Web Sites Per User
Configurable Report Parameters including:, Profiles, Devices, Scope, Types, Format, Schedule, and Output
Customized Report Output
Reports on Demand
Report Browsing

Log Browser And Real-Time Log Viewer

Real-Time Log Viewer
Historical Log Viewer
Customized Log Views
Log Filtering, Search, and Rolling Top Users
View Web, Email, and/or FTP Traffic
View Instant Messaging and P2P Traffic
Filter Traffic Summaries
Device Summary
Traffic Reports Including: Event (Admin Auditing), Viruses Detected, Attack (IPS Attacks), Web Content Filtering, Email Filtering, Content (Web, Email, IM)

Vulnerability and Compliance Management Scanning

Basic set of vulnerability signatures included with 4.1 OS, updates available as optional subscription
Detect vulnerabilities / recommend remediation
Group/report by asset class
CVE compatibility with search by CVE names
PCI DSS scans and reports

FortiGuard® Security Subscription Services deliver dynamic, automated updates for Fortinet products. The Fortinet Global Security Research Team creates these updates to ensure up-to-date protection against sophisticated threats. Subscriptions include antivirus, intrusion prevention, web filtering, antispam, vulnerability and compliance management, application control, and database security services.

FortiCare™ Support Services provide global support for all Fortinet products and services. FortiCare support enables your Fortinet products to perform optimally. Support plans start with 8x5 Enhanced Support with “return and replace” hardware replacement or 24x7 Comprehensive Support with advanced replacement. Options include Premium Support, Premium RMA, and Professional Services. All hardware products include a 1-year limited hardware warranty and 90-day limited software warranty.
